Texas Capital's TXS and OILT ETFs Now Trading on the Texas Stock Exchange

Two Texas-Focused Funds Are TXSE's First Primary Listings

DALLAS – September 16, 2026 – Texas Capital Bank Private Wealth Advisors, a subsidiary of Texas Capital Bank, and the [Texas Capital Funds Trust](#) today announced that the Texas Capital Texas Equity Index ETF (TXS) and Texas Capital Texas Oil Index ETF (OILT) are now trading on the Texas Stock Exchange (TXSE), becoming the exchange's first primary listings and first ETFs.

The primary listings of TXS and OILT transferred from NYSE Arca to TXSE effective at market open today. The funds will retain their existing investment objectives and ticker symbols, and the transfer does not require any action by existing shareholders. Investors can continue to buy or sell shares in either ETF through their existing brokerage relationships.

"The first day of trading for TXS and OILT on the Texas Stock Exchange is a defining moment for Texas and a milestone in our state's continued progress as a global center for capital markets and corporate finance," said Daniel Hoverman, Head of Corporate & Investment Banking at Texas Capital. "Texas Capital was built to serve the Texas economy, and we believe Texas should have exceptional financial infrastructure that accelerates the extraordinary growth and innovation taking place here. We are proud that TXS and OILT are the first primary listings on the TXSE and honored that Texas Capital can play a role in this historic moment."

TXS provides investors exposure to a diversified portfolio of publicly traded companies headquartered in Texas, while OILT provides targeted exposure to companies participating in oil and gas production in Texas. Together, the funds offer investors two distinct ways to participate in the economic strength and growth of Texas.

Texas Capital and TXSE will commemorate the milestone with a closing bell ceremony today in Dallas featuring remarks from Secretary of State Robert S. Howden, TXSE Chairman & CEO James H. Lee and Texas Capital Chairman, President & CEO Rob C. Holmes. The ceremony will be livestreamed beginning approximately at 2:50 p.m. CT and can be viewed online [here](#).

Investors should carefully consider the investment objectives, risks, and charges of the funds before investing. The prospectus contains this information and other information about the funds, and it should be read carefully before investing. Investors can obtain a copy of the prospectus by calling 844.TCB.ETFS (844.822.3837).

Investment and Market Risk. As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or prolonged periods of time. Unlike mutual funds, shares of ETFs are not individually redeemable directly with the ETF. Shares of ETFs are bought and sold at market price, which may be higher or lower than the net asset value (NAV).

Texas Risk. Texas' economy relies to a significant extent on certain key industries, such as the oil and gas industry (including drilling, production and refining), chemicals production, technology and telecommunications equipment manufacturing and international trade. Each of these industries has from time to time suffered from economic downturns, and adverse conditions in one or more of these industries could impair the ability of issuers of Texas municipal securities to pay principal or interest on their obligations.

Index Tracking Risk. There is no guarantee that the Fund will achieve a high degree of correlation to the Index and therefore achieve its investment objective. The Fund may have difficulty achieving its investment objective due to fees, expenses (including rebalancing expenses) and other transaction costs related to the normal operation of the Fund. These costs that may be incurred by the Fund are not incurred by the Index, which may make it more difficult for the Fund to track the Index.

Geographic Concentration Risk. Because the Fund and the Index will invest only in issuers headquartered in a particular geographic region, the Fund's performance is expected to be closely tied to various factors such as social, financial, economic, and political conditions within that region. Events that negatively affect that region may cause the value of the Fund's shares to decrease in some cases significantly. As a result, the Fund may be more volatile than more geographically diverse funds.

Energy Sector Risk. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility, energy conservation, environmental policies, depletion of resources and the cost of providing the specific utility services and other factors that they cannot control.

Oil and Gas Companies Risk. Oil and gas companies develop and produce crude oil and natural gas and provide drilling and other energy resources production and distribution related services. Stock prices for these types of companies are affected by supply and demand both for their specific product or service and for energy products in general. The price of oil and gas, exploration and production spending, government regulation, world events and economic conditions will likewise affect the performance of these companies. Correspondingly, securities of oil and gas companies are subject to swift price and supply fluctuations caused by events relating to international politics, energy conservation, the success of exploration projects and tax and other governmental regulatory policies. Weak demand for the companies' products or services or for energy products and services in general, as well as negative developments in these and other areas, would adversely impact the performance of the Fund. Oil and gas exploration and production can be significantly affected by natural disasters as well as changes in exchange rates, interest rates, government regulation, world events and economic conditions. These companies also may be at risk for environmental damage claims.

Passive Investment Risk. The Fund is not actively managed, and the Adviser will not sell a security due to current or projected under performance of a security, industry, or sector, unless that security is removed from the Index by the Index Provider, who is unaffiliated with the Adviser. The Fund invests in securities included in the Index regardless of the Adviser's independent analysis of the investment decision.

Shares are not individually redeemable and are issued and redeemed at their net asset value only in large, specified blocks of shares called creation units. Shares otherwise can be bought and sold only through exchange trading at market price (not NAV). Shares may trade at a premium or discount to their net asset value in the secondary market. Brokerage commissions will reduce returns.

INVESTMENT PRODUCTS: NOT A DEPOSIT | NOT FDIC-INSURED | NOT INSURED BY ANY FEDERAL GOVERNMENT AGENCY | NOT GUARANTEED BY THE BANK | MAY GO DOWN IN VALUE.
